### LED Module Implementation Business

Siix Corporation hereby announces that we are now certified as a partner in the module implementation field of the next generation LEDs(Light Emitting Diodes) of OSRAM Opto Semiconductors GmbH (Head Office: Germany), one of the two major makers of optical semiconductors in the world, while we have been focusing on and developing business opportunities for LEDs as a promising business field for the mid and long term.

To expand the market for LEDs, OSRAM Opto Semiconductors GmbH, which develops, manufactures, and sells optical semiconductors, started a special project named “LLFY (LED Light for you)” and selected partners in the fields of optics, heat, and electronics. SIIX Corporation is certified as the only Japanese EMS company that has established the know-how to efficiently mount the high-brightness LEDs developed by OSRAM Opto Semiconductors GmbH and can provide module solutions in the Electronic Solutions field.

(For details, please refer to <http://www.ledlightforyou.com/>.)

Today, LEDs are rapidly attracting attention for their lifetime, high brightness, and low power consumption, promising to rapidly expand the market. LEDs will revolutionize the illumination market, replacing light bulbs and fluorescent lamps in the near future. In particular, LEDs will be used for the backlights of large LCD screens, headlights of vehicles, modern buildings such as museums and airports, and areas sensitive to ultra-violet light.

We will expand our LED mounting business with this certification as a stepping stone. We will start our business in the European markets, which will be expanded to the Asian region as well as the American region.
